PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES
THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVIT.
IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGIANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.
-!- SUBUNIT: MONOMER.
-!- DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGRESTS THAT THE
AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER

                                                                                                                                                                                                                                                     SUBUNIT: MONOMER.

DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE AMINO ENDS OF THESE PPOTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER SECRETORY PROTEINS.
           RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytokine, Macrophage, Mitogen; Inflammatory response, Pyrogen; 3D-structure.

IL-1 SITMULATES
THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, & FIBROBLAST GROWHYNEATON ACTIVITY.
IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBUNIT: MONOMER (BY SIMILARITY).

DOMAIN: THE SIMILARITY AMONG THE 1L-1 PRECURSORS SUGGESTS THAT THE AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER

                                                                                                                                                                                                                                               DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION. MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER SECRETORY PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein Eng. 2:545-551(1989).

-i- FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES
THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, F FIBROBLAST GROWTH FACTOR ACTIVITY.
IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.
SUBUNIT: MONOMER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      54 KVPIFLGIQGGSRCLACVETEEGPSLQLEDVNIEELYKGGEEATRFTFFQSSSGSAFRLE 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ·;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of cDNA encoding a novel human interleukin-1 receptor antagonist-related polypeptide, IL-Ira-R (see AM50218), which has interleukin-1 inhibitor activity. The sequence was derived from CDNA clones obtained by PCR and RACE from placenta and foetal scalp cDNA libraries. Also isolated was an IL-Ira-R variant sequence (see AM70234), which differed from the present sequence at nuclectide positions 194 and 215 (both altering the encoded amino acid sequence), and a splice variant (see AN70236). The invention provides IL-Ira-R polypeptides and nucleic acids, as well as selective binding agents, vectors, host cells and methods for producing the IL-Ira-R polypeptides. It also provides transmetutional compositions and methods for the diagnosis, treatment, amelioration and/or prevention of diseases, disorders and conditions associated with IL-Ira-R, such as those involving immented system dysfunction, infection, weight disorders, neuronal dysfunction, lung, skin, kidney, bone, vascular system, tumour cells, reproductive system, and eye. The nucleic acids are useful nuclear and as a second and as a sec

New isolated polynucleotide encoding interleukin-1 Hy2 for diagnosing, preventing and treating disorders, such as cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the cDNA insert of clone pIL-1HY2 AAB1992 and AAB1992 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            position 54-56 of the present sequence. However, a predicted CDNA sequence (see AAA89178) based on IL-1 Hy2 genomic DNA contained a C to T change that resulted in an alternative upstream initiating methiconine which extended the open reading frame. The IL-1 Hy2 polypeptides and polynucleotides are used to treat cancers involving elevated levels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma, giant cell tumours of bone, acute myelogenous leukaemia, oral epidermoid carcinoma or squamous cell carcinoma, and inflammatory disease mediated by interleukin-18 (all claimed). They can also be used to diagnose, prevent or treat shock, thrombosis, acute pancreatitis, arthritis, vasculitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lupus, immune complex glomerulonephritis, pancreatic cell damage, allograft and xenograft transplantation, graft versus host disease, inflammatory bowel disease, bone degenerative diseases, diabetes

SS

polynucleotide encoding interleukin-1 Hy2 for diagnosing, of treating disorders, such as cancers and inflammatory WPI; 2001-016409/02. P-PSDB; AAB19922. reventing and New isolated

Claim 1; Page 145-146; 158pp; English.

diseases

The present sequence is that of cDNA encoding human interleukin-1 receptor antagonist family. The sequence was obtained following resequencing of cDNA clone pir-lHy2 (see AAA89175), extending the sequencing of cDNA clone pir-lHy2 (see AAA89175), extending the sequencing of cDNA clone pir-lHy2 (see AAA89175), extending the sequencing of cDNA clone pir-lHy2 cpnA sequence (see AAA89178), predicted from the IL-1 Hy2 cDNA sequence (see AAA89178), predicted from the IL-1 Hy2 cDNA sequence (see AAA89178), predicted from the IL-1 Hy2 cDNA sequence (see AAA89178), outcleotide change at position 279, which generates an alternative upstream initiating methionine for open reading frame encoding a 200-amino acid protein (see AAB1824). II-1 Hy2 polypeptides and polynucleotides are used to treat cancers involving elevated levels polynucleotides are used to treat cancers involving elevated levels epidermoid carcinoma or squamous cell carcinoma, and inflammatory giant cell tumours of bone, acute myelogenous leukaemia, oral epidermoid carcinoma or squamous cell carcinoma, and inflammatory used to diagnose, prevent or treat shock, thrombosis, acute pancreatitis, arthitis, vascultis, lupus, immune complex classes, bone degenerative disease, inflammatory bowel disease, bone degenerative disease, diabetes and neurodegenerative hybridization probes and PCR primers, in chromosome and gene mapping, in the recombinant production of IL-1 Hy2 protein, and in

The present sequence is that of CDNA encoding human interleukin-1
Hy2 (IL-1 Hy2, see AAB19924), a novel member of the interleukin-1
receptor antagonist family. The sequence was deduced from isolated
IL-1 Hy2 genomic DNA (see AAB9177). It contains thymidine at
uncleotide 279, whereas IL-1 Hy2 CDNA obtained by PCR amplification
(see AAAB9176) has cytosine at this position. The C to T change
extends the IL-1 Hy2 open reading frame in the 5 direction.

The C to T change
catedas a 152-amino acid protein, while the amplified CDNA
resulting in a 200-amino acid protein, while the amplified CDNA
resulting in a 200-amino acid protein, while the amplified CDNA
resulting the translation initiation codon at nucleotide 422 of
the present sequence are more similar to the Kozak translation
ctart site consensus than the sequences surrounding nucleotide 278,
suggesting that IL-1 Hy2 polypeptides and polymucleotides are used to treat
concers involving elevated levels of II-1, such as breast
adenocarcinoma, brain tumours, melanoma, giant cell tumours of
bone, acute myelogenous leukaemia, oral epidermoid carcinoma or
squamous cell carcinoma, and inflammatory disease mediated by
interleukin-18 (all claimed). They can also be used to diagnose,
interleukin-18 (all claimed). They can also be used to diagnose,
call damage, allograft and xenograft transplantation, graft versus
coll damage, allograft and xenograft transplantation, graft versus
call damages. Inflammatory bowel diseases. bone degenerative
recell damages and negative degenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide encoding interleukin-1 Hy2 for diagnosin preventing and treating disorders, such as cancers and inflammatory dispases.
                                                                                                                                                                                                                                                                                                                                                                                                  Interleukin-2 Hy2; IL-1 Hy2; human; interleukin-1 receptor; antagonist; cancer; breast adenocarcinoma; brain tumour; melanoma; myeloma; giant cell tumour of bone; acute myelogenous leukaemia; oral epidermoid carcinoma; squamous cell carcinoma; inflammation; antitumour; antiinflammatory; diagnosis; therapy; chromosome 2; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ā
                                                                                                                                                                                                                                                                                                                                   Human interleukin-1 Hy2 cDNA (alternative ORF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pace

cobtained by screening a commercial human BAC library with IL-1 Hy2
CDNA. Exons were predicted using GenScan software. The predicted
CDNA (see AAA89178) based on this genomic sequence contains thymidine
at nucleotide 279, whereas IL-1 Hy2 CDNA obtained by PCR
amplification (see AAA89176) contains cytosine at this position. The
change in nucleotides extends the IL-1 Hy2 open reading frame in the
s' direction, resulting in a 200-amino acid polypeptide, whereas the
amplified cDNA encodes a 152-amino acid polypeptide (see AAB19922).
IL-1 Hy2 polypeptides and polymucleotides are used to treat cancers
involving elevated levels of IL-1, such as breast adenocarcinome,
predictions, melanoma, giant cell timmours of bone, acute
myelogenous leukaemia, oral epidermoid carcinoma or squamous cell
carcinoma, and inflammatory disease mediated by interleukin-18 (all
carcinoma, thrombosis, acute pancreatitis, arthritis, vasculitis,
lupus, immune complex glomeratitis, arthritis, vasculitis,
lupus, immune complex glomeratitis, arthritis, vasculitis,
allograft and xenograft transplantation, graft versus host disease,
inflammatory bowel disease, bone degenerative diseases, diabetes
and neurodegenerative disorders. The polynucleotides are also
cuseful for the design of hybridization probes and PCR primers, in

```
Novel interleukin-1 receptor antagonist-related polypeptide, its fragment, variant useful for treating rheumatoid arthritis, septicemia, Parkinson's disease, epilepsy, cystic fibrosis, Paget's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of cDNA encoding a splice variant (see AAM50219) of human interleukin-1 receptor antagonist-related polypeptide IL-Ira-R, a novel protein that has interleukin-1 inhibitor activity. The sequence was obtained from a human placenta cDNA library by PCR amplification. The splice variant may arise from splicing (or a fusion) of the first 2 exons of the upstream IL-1 omega gene onto the second exon of the IL-Ira-R gene. The invention provides IL-Ira-R polypeptides and nucleic acids, as well as selective binding agents, vectors, host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and methods for producing the IL-Ira-R polypeptides. It also provides pharmaceutical compositions and methods for the diagnosis, treatment, amelioration and/or prevention of diseases, disorders and conditions associated with IL-Ira-R, such as those involving immune system dysfunction, infection, weight disorders, neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Fig 3; 163pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides.

CC introduction of the invention, methods of identifying compounds which bind to polypeptides of the invention and methods of identifying compounds which company that into their probable biological activities, and hence giving an insight into their probable biological activities, and hence of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence contential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell afferentiation activities, stem cell growth factor activity; inmunomodulatory activity; tissue growth activity; chemotactic or chemokinetic activities; haemostatic, thrombolic or thrombolytic activities; receptor or ligand activities; or may be contaction or their biological activities, polypeptides and nucleotides of the invention are useful for presenting, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cander and proven are such in for presenting, treating or layens include and conditions, are useful for presenting, treating or layens.

CC ancers, haematopoletic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), cronicary heart disease.

CC ancers, haematopoletic disorders (e.g., astendance openeration and crepting (e.g., of burns, incisions and ulcers), while those with contactions and addition be used to promone wound crepting and fungal infections and ulcers), while those with proving a pertention in disorders is addition to immune disorders.

CC healing (e.g., of burns, incisions and ulcers), while those with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             isolated FIL-1 theta polypeptide to induce or inhibit the induction of fever and to stimulate the immune system for the treatment of microbial infections -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to interleukin-1 (IL-1) family ligand designated as FIL-1 theta polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemia/ lymphoma, wrinkly skin syndrome and tibial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibit the activation of vascular endothelial cells and lymphocytes; the induction of local tissue destruction and fever; the stimulation of macrophages and prostaglandins. They are also used to treat inflammation and microbial infections. FIL-1 theta DNA is useful in antisense therapy and gene therapy. The present sequence is a DNA encoding human FIL-1 theta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention provides novel polypeptides (NOVX) selected from human transmembrane protein (NOVTRAN), neuromedin peptide (NOVDRUR), gonadotropin-like protein (NOVGON) and two interleukin-l receptor antagonist proteins (NOVINRA A and B). The invention also provides methods in which a NOVX polypeptide, polynucleotide and antibody are used in the detection, prevention and treatment of a broad range of pathological states. NOVTRAN can be used to treat is a cell signaling disorder such as cancer, immune response disorder, hematopoietic disorder, auscle disorder, neurologic disorder, cancers of centrain nervous system, breast, colon, ovary, kidney, prostate and thyroid. NOVGON can be used to treat reproductive development disorder, metabolic function disorder and melanoma. NOVINTRA A and B can be used to treat bone metabolism or structure disorder, inflammatory response disorder, immune regulation disorder, septic shock, stroke, diabetes, arthritis and cancer. The present sequence represents a cDNA encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to interleukin-1 (IL-1) family ligand designated by as FLL-1 theta polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemia/lymphoma, wrinkly skin syndroma and tabial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibit the activation of vascular endothelial cells and lymphocytes; the induction of local tissue destruction and fever; the stimulation of macrophages and vascular endothelial cells to produce IL-6 and the induction of local tissue destruction and fever; the stimulation of macrophages and vascular endothelial cells to produce IL-6 and the induction of prostaglandins. They are also used to treat inflammation and microbial infections. FIL-1 theta DNA is useful in antisense therapy and gene therapy. The present sequence is a DNA encoding mouse FIL-1 theta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  96 aattaaatatgcagaccagaaggctctatacacaagagatggccagctgctggtggaga 155

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to interleukin-1 (IL-1) family ligand designated as FIL-1 theta polypeptides and nucleic acid molecules encoding such polypeptides. FIL-1 theta DNA is used to identify glaucoma, insulin dependent diabetes mellitus, ectodermal dysplasia, T-cell leukaemia/lymphoma, wrinkly skin syndrome and tibial muscular dystrophy. FIL-1 theta polypeptides are used to activate and/or inhibit the activation

The mouse IL-Ira R gene sequence was also determined (see AAI70238). The invention provides mouse and human IL-Ira-R polypeptides and nucleic acids, as well as selective binding agents, vectors, host calls and methods for producing the IL-Ira-R polypeptides. It also provides pharmaceutical compositions and methods for the diagnosis, treatment, amelioration and/or prevention of diseases, disorders and conditions associated with IL-Ira-R, such as those involving dimmune system dysfunction, infection, weight disorders, neuronal dysfunction, lung, skin, kidney, bone, vascular system, tumour calls, reproductive system, and eye. The nucleic acids are useful in gene therapy, gene mapping, transgenic animal breeding, and as
                                                                                                                                           Novel interleukin-1 receptor antagonist-related polypeptide, its fragment, variant useful for treating rheumatoid arthritis, septicemia, Parkinson's disease, epilepsy, cystic fibrosis, Paget's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             423

The sequence is predicted from isolated IL-1 Hy2 perpendices in predicted from isolated IL-1 Hy2 perpendices hare 81.7% homology. The multine ABL9929 IL-1 Hy2 polypeptides share 81.7% homology. The multine genomic DNA can be used to generate transpend animals which overexpress IL-1 Hy2 protein or have the IL-2 Hy2 gene knocked out. Human IL-1 Hy2 propeptides and polynucleotides are used to treat cancers involving elevated levels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma, giant cell tumours of bone, acute myelogenous leukaemia, oral epidemoid carcinoma or squamous cell carcinoma, and inflammatory disease mediated by interleukin-18 (all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide encoding interleukin-1 Hy2 for diagnosing, preventing and treating disorders, such as cancers and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64 atgiticcotcoccatggcaagatactacataattaaatatgcagaccagaaggcicta 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      124 tacacaagagatggccagctgctggtgggagatcctgttgcagacaactgctgtgcagag 183

                       The present sequence is that of mouse genomic DNA encoding interleukin-1 Hy2 (IL-1 Hy2, see AAB19925), a novel member of the interleukin-1 receptor antagonist family. The DNA was obtained by screening a commercial mouse BAC library with IL-1 Hy2 cDNA. Exons were predicted using GenScan software. The mouse and human (see AAB19922) IL-1 Hy2 polypeptides share B1.7% homology. The genomic CC DNA can be used to generate transgenic animals which overexpress CC IL-1 Hy2 polypeptides and polymouteoides are used to treat cancers involving elevated levels of IL-1, such as breast adenocarcinoma, brain tumours, melanoma, giant cell tumours of bone, acute cancers carcinoma, and inflammatory disease mediated by interleukin-18 (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1892 agtgaaccetecaeceataettgaattetaetttgagatgagteggtaaagagaeataagg 3951
